

“When it comes to managing production costs, Liberty helps identify opportunities that allow your pricing to remain competitive.”

Liberty workorder management system control your costs

A Closer Look at Liberty

with: **Greg McKone, Owner GreenTree Software**

Liberty has proven itself in manufacturing and production since 2002. It has been a feature complete product since 2003 and continues to be improved based on customer feedback and feature requests. Liberty captures your production cost information and provides that information to managers via reporting and to sales staff via quote generation to help you ensure that your products are produced profitably and competitively.

Liberty doesn't change the way your company works, instead it works alongside your existing systems to allow you a keen insight into production costing. Since Liberty is a web based application, that means no software to install or manage on your PCs. It's easy and it works. Stop shuffling paper and give us a call.
